Changes • The Flash build target is no longer supported from this release onwards.

Fixes • 2D: Custom sprites are now forced to have unique name when created through Sprite Editor.. It works completely fine in the editor but as soon as I make a build its offset such that 3 quarters of the UI is offscreen.. • 2D: Fixed PolygonCollider2D mesh generation on Android • 2D: Hotkey for sprite Trim 'T' doesn't intervene with sprite naming anymore.. This makes it possible to load different content based on the runtime version already installed.

[Professional Graphic Design Software Mac](#)

• Oculus Plugin: Future Oculus Plugin releases will no longer require Direct\_To\_Rift.. • Standalone: Screen dpi implemented for OSX and Windows standalone platforms. [Tai Nhạc Tre Hay Va Moi Nhat Nam 2013](#)
